Smart Contract Standardisation

Ethereum:

A standards-based blockchain ecosystem featuring a smart contract engine

Enterprise Ethereum:

Extensions for "permissioned blockchains"

<https://entethalliance.github.io/client-spec/spec.html>

<https://entethalliance.github.io/client-spec/chainspec.html>

"Standards-based":

- Interoperability of multiple clients

- Simplify building ecosystem tools

Smart contracts:

- Known standards reduce implementation error

- Configure size limits, Gas prices, etc.

Cross-chain interoperability

- First Ethereum, then other blockchains
